# **1.INTRODUCTION**

## **1.1 PROJECT OVERVIEW**

Students are often worried about their chances of admission to University. The aim of this project is to help students in shortlisting universities with their profiles. The predicted output gives them a fair idea about their admission chances in a particular university. This analysis should also help students who are currently preparing or will be preparing to get a better idea.

## **1.2 PURPOSE**

This project Engineering Admission Predictor System is web based application in which students can register with their personal as well as marks details for prediction the admission in colleges and the administrator can allot the seats for the students. Administrator can add the college details and he batch details

## **2.Literature Survey**

**2.1 Existing problem:** The problem here is the students can't able to know their chance percentage of getting into the desired college and the difficulty they face here is at what kind of percentage is needed to get into that college.

## 2.2 References:

- <https://ieeexplore.ieee.org/document/9042216>
- <https://ieeexplore.ieee.org/abstract/document/9397988>
- <https://ieeexplore.ieee.org/document/8862140>

## 2.3 Problem Statement Definition

Concerns about getting into college are common among students. This project's goal is to assist students in narrowing down institutions based on their profiles. The anticipated results offer them a good indication of their prospects of admission to a particular university. This analysis ought to provide better insight for students who are or will be preparing for exams. The issue here is that the students are unable to determine their likelihood of entering the desired college, and they struggle to understand what kind of percentage is required to enter that institution.

## 3.IDEATION AND PROPOSED SOLUTION

### 3.1 EMPATHY MAP CANVAS

A concise, easy-to-understand image called an empathy map condenses information about a user's activities and view points. It is a useful tool that enables teams to better understand their users.

## 3.2 Ideation & Brainstorming

Everyone in a team is urged to participate in the process of original thought that yields problem solutions during a brainstorming session. In order to generate a wealth of unique solutions, volume over quality is prioritised, unexpected ideas are embraced and expanded upon, and everyone is urged to participate.

1

**Define your problem statement**  
What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.  
⌚ 5 minutes

PROBLEM

To determine a student's eligibility for admission to a university, develop a thorough prediction system that considers a range of elements, including the CGPA, Technical Skills, English proficiency test, and statement of purpose.

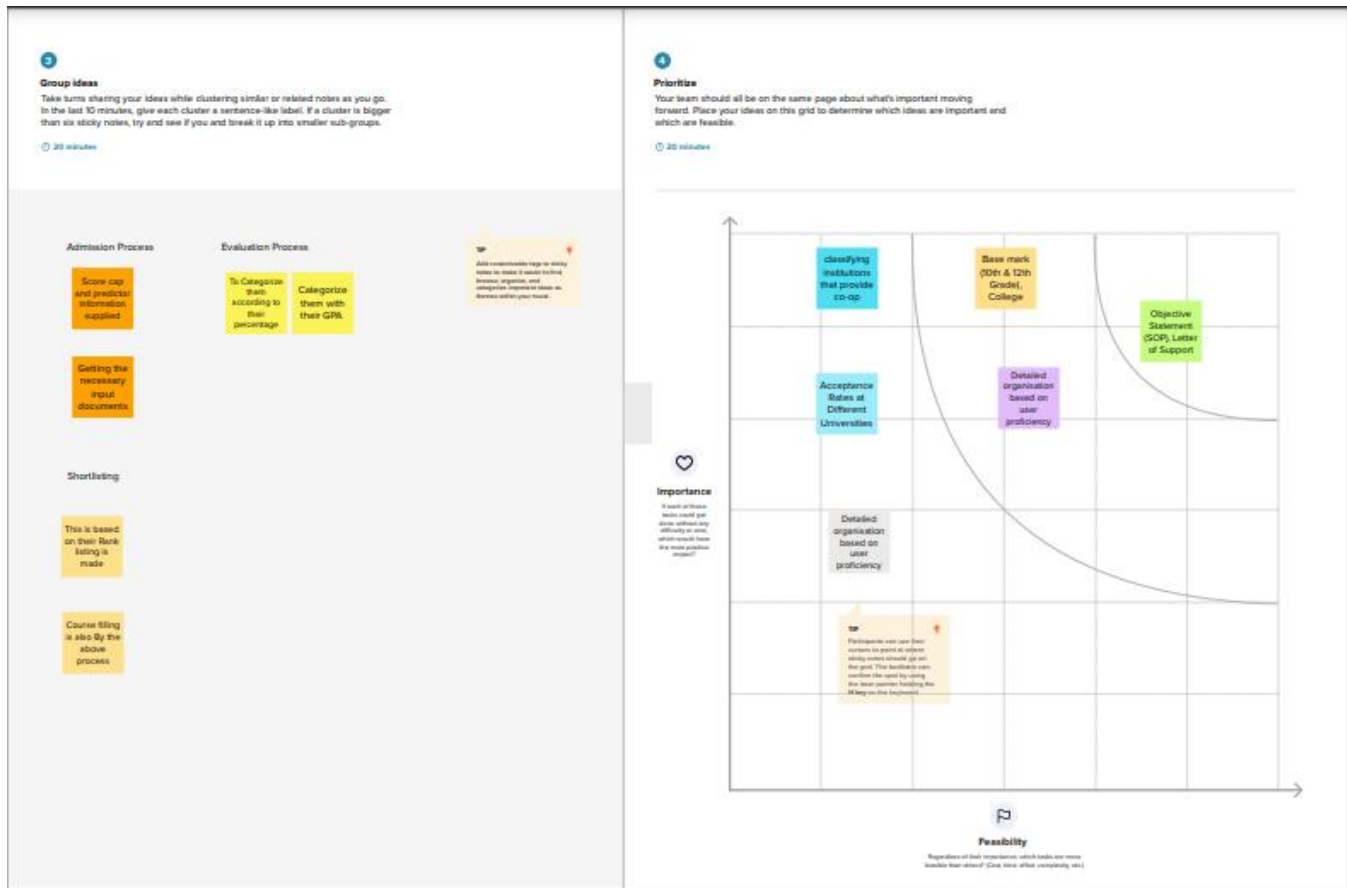

2

**Brainstorm**  
Write down any ideas that come to mind that address your problem statement.  
⌚ 10 minutes

TIP

You can select a sticky note and hit the pencil icon to edit it (even to start drawing!)

Jerish Johnson D A	Harish M U	Arun Kumar k	Janarthanan S
Give precise information about the listed university.	Details provided by peers and specialists regarding university life	Obtain score inputs	Documents and References
a list of potential courses that the user is qualified for	building a user-friendly website	College Facilities	Cost Estimator
Several peer testimonials and a blogspot creation should be linked.			

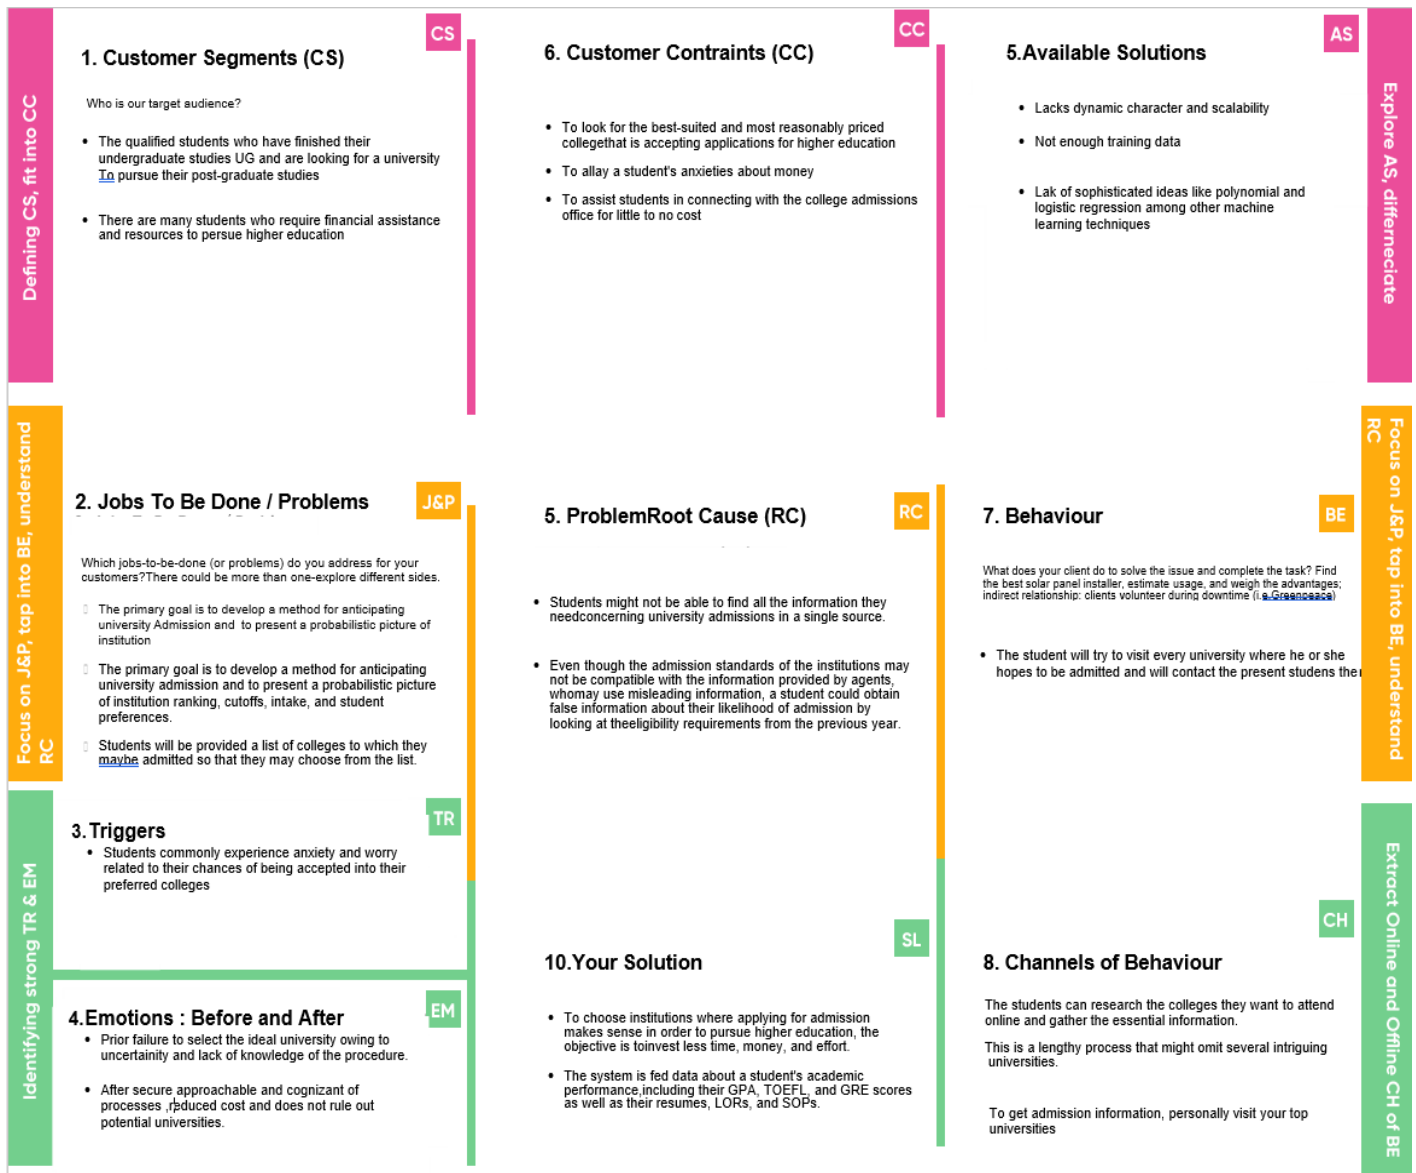

### 3.3 Proposed Solution

S.No	meter	Description
1	Problem Statement (Problem to be solved)	Check the University eligibility criteria of a student by their cut-off mark.
2	Solution description	In order to immediately benefit from preparing ourselves in accordance with the university's requirements, students and parents need a mechanism to use and list the universities available for their cut-off.
3	Uniqueness	Python language is used in order to analyse the fastest way to know whether the eligibility criteria is met for the particular college.
4	Impact / Customer Satisfaction	The interface is much easier to use so that anyone makes it an easier way to know their eligibility criteria.

	less Model (Revenue Model)	can be deployed so that based on this usability ges get admission and the institutions and colleges e charged for this t added in the list.
	bility of the Solution	most scalable that the seats available in thecollege based on the students ranking based on their cut-o s the seats are allotted based on their rankings

### 3.4 Problem Solution Fit

## 4. REQUIREMENT ANALYSIS

### 4.1 Functional Requirements

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	User Data Collection	The data such as GRE score,cut-off marks are collected.
FR-4	Evaluation	The evaluation is done using the students cutoff marks,GRE score.
FR-5	Prediction	Prediction is done based on the users given data by sing using the machine learning algorithm.
FR-6	Output	Based on their cut-off marks the eligibility percentageof the selected college is shown.

### 4.2 Non Funtional Requirements

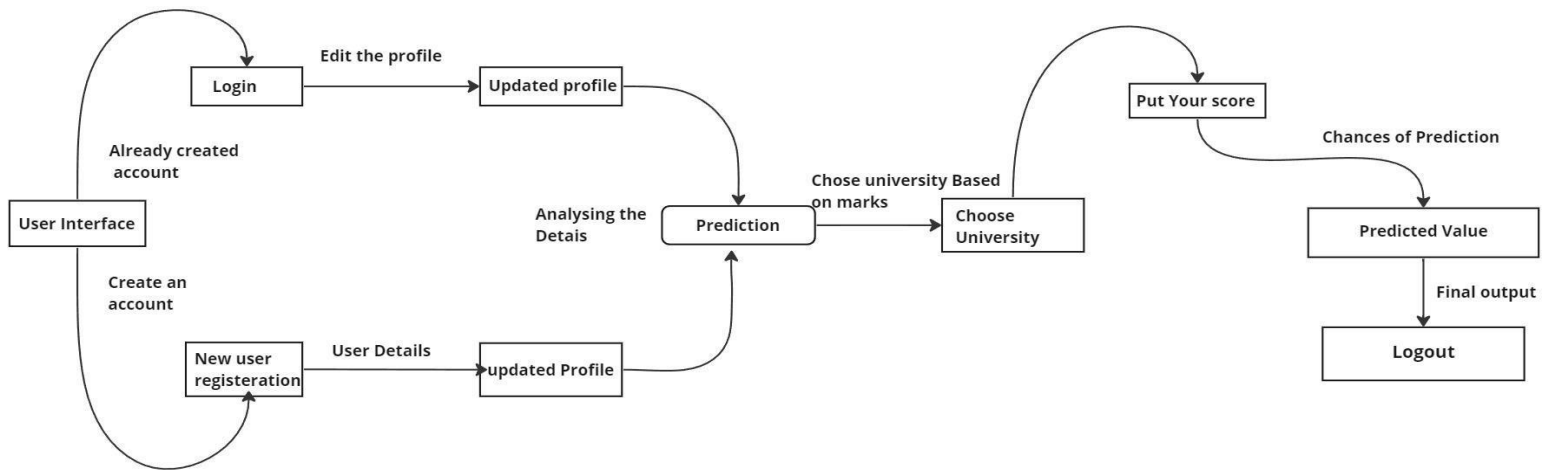

FR No.	Non-Functional Requirement	Description
NFR-1	<b>Usability</b>	Ease of Access UI Satisfaction
NFR-2	<b>Security</b>	Encryption is used Login used ID and password is required.
NFR-3	<b>Reliability</b>	The predictor system will be consistent in order forthe system to produce trustworthy and accurate outcomes.
NFR-4	<b>Performance</b>	A logistic regression is used

NFR-5	<b>Availability</b>	Since it runs on the cloud it can be accessed anywhere, anytime, anyplace.
NFR-6	<b>Scalability</b>	It has the ability to handle any amount of data that is given by the user.

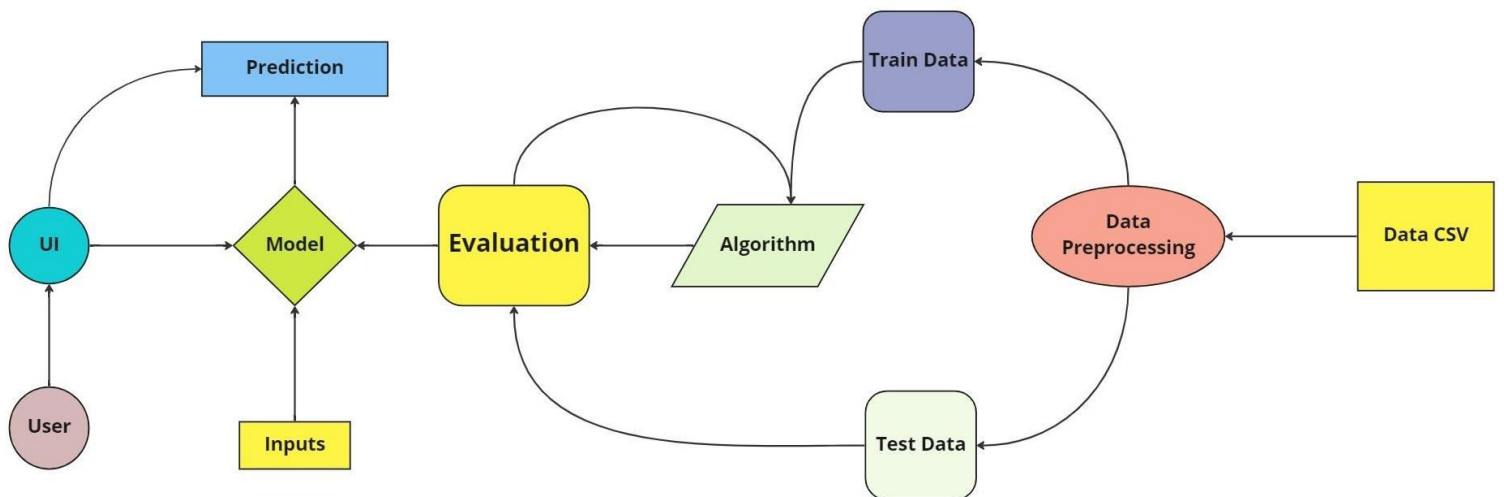

## 5.PROJECT DESIGN

### 5.1 Data Flow Diagram

miro

### 5.2 Solution and Technical Architecture

miro

Table:Components and Technologies

S.No	Component	Description	Technology
1	User Interface	The Front-end part of the application	HTML,CSS
2	Application Logic-1	Logic for a process in the application	Python
3	Application Logic-2	Logic for a process in the application	IBM Watson
4	Application Logic-3	Logic for a process in the application	IBM Watson
5	Database	Data type ,Configuration.	IBM cloud
6	Cloud Database	Database services on cloud	IBM DB2,IBM Cloudbant,etc.
7	Libraries	Import Libraries into data	Numpy,Pandas,Seaborn,Matplotlib
8	File Storage	File storage requirements	Local File System
9	Machine Learning Model	Purpose of Machine Learning Model	Admission Prediction Model
10	Training and testing data	Purpose of training and testing data	Logistic Regression algorithm
11	Accuracy	Accuracy of the tested and trained data	Root Mean Squared Logarithmic Error(RMSLE),Mean Squared Error(MSE),Statistics.
12	Infrastructure	Cloud Local Server Configuration	Local

Table : Application Characteristics

S.No	Characteristics	Description	Technologies Used
1	Open-Source Frameworks	The opensource Framework used here is python.	Flask Framework
2	Security Implementations	The user profile has been stored in a secured way in the cloud.	Encryptions
3	Scalable Architecture	Many computations can be done in a time saving and effective way using ML.	Logistic Regression
4	Availability	Our web application is available at anytime and at any place	IBM Balancer
5	Performance	As logistic regression is applied to develop the performance will be more effective	Logistic Regression

## 5.3 User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Web user)	Registration	USN-1	As a user, I can create an account so that I can access it.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I can register to the application through Gmail	I can access my account	Medium	Sprint-1
	Login	USN-3	As a user, I can log into the application by entering the login credentials..	I can access my account	High	Sprint-1
	Edit Profile	USN-4	As a user, after logging in, I will have to update my profile by providing all the required details.	I can complete the profile to proceed with the prediction process.	High	Sprint-2
	Choose University	USN-5	As a user, I will be able to view the list of Universities that the students are eligible to apply based on the cutoff given.	I can put the cut off mark and the GRE score so that I can see the universities and chances of getting it	High	Sprint-3
	Choose Course	USN-6	As a user, I will be able to view the list of courses that the students are eligible to apply.	I can be able to see the list of colleges available to me.	Medium	Sprint-3
	Admission Process	USN-7	As a user, I will be able to view the chances of getting that college based on my cutoff given.	I can view the details of Admission process being displayed at the end of prediction.	High	Sprint-4
Administrator	Authentication	USN-8	As an admin, the login credential of the user is authenticated by me.	I can retrieve and make use of all the user details.	High	Sprint-1
	Update Profile	USN-9	As an admin, I can verify the user entered details.	I can confirm and access the user details.	High	Sprint-2

	Prediction	USN-10	As an admin, I can test the trained ML	I can test the user data	High	Sprint-3
			model by analysing the user details by ML algorithms like Logistic Regression.	with the trained ML model.		
	Output	USN-12	As an admin, I can upload the confirmation of user for the prediction into the Database.	I can keep track of user data and activities by storing in database.	High	Sprint-4

## 6.PROJECT PLANNING & SCHEDULING

### 6.1 Sprint Planning and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password	2	low	Harish,Arun kumar
Sprint-1	Entering cutoff marks	USN-2	As a user I can enter my cut off scores	3	High	Harish , Arun kumar
Sprint-1	UI	USN-3	The user interface is created	4	high	Jerish Johnson,Janarthanan
Sprint-2	Model Building	USN-4	Using the dataset the model can be build using ML algorithm	6	high	Arunkumar,Janarthanan
Sprint-2		USN-5	Training the classification model	5	High	Janarthanan harish
Sprint-3	Application buiding	USN-6	Building the python code to run the application	5	high	Jerish,harish
Sprint-3	Testing	USN-7	Testing the ML model	3	low	Harish,Arun kumar
Sprint-3		USN-8	Predicted result is shown on the website	4	Medium	Jerish,harish
Sprint-4	Link the model	USN-9	Linking the HTML and the python code	4	hign	Jerish,janarthanan
Sprint-4	Deployment of the project	USN-10	Deployment in the IBM cloud	6	high	Jerish Johnson,Janarthanan

### 6.2 Sprint Delivery Schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	3	29 October
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	4	5 November
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	4	10 November
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	5	15 November

----	-------------------	--	--

## 10. ADVANTAGES AND DISADVANTAGES

### Advantages:

- It aids students in picking the appropriate college.
- When compared to the current system, this one has a lower mistake probability.
- It is quick, effective, and dependable.
- Prevents inconsistent and redundant data.
- Very approachable.
- Data are readily available

### Disadvantages:

- A live internet connection is necessary.

## 11. CONCLUSION

Thus, it can be said that our model, which uses the Multiple Linear Regression Algorithm, offers a reliable prediction score and that users can guess the scores accurately. The website's user interface is straightforward and makes it easy for users to use the feature.

## 12. FUTURE SCOPE

By including information about each university, we hope to improve the user experience by allowing users to learn more about the local culture, alumni testimonials, university rankings, and other factors.
